

Thank you for downloading Seasons Free Preset!

HOW TO DOWNLOAD:

Follow the installation instructions in our video [here](#).

HOW TO USE:

To see Seasons Free Preset in action, we have shared a video called "How to edit perfect skin tones in Lightroom" which you can access [here](#).

FAQ'S:

Q: Does this presets work on Lightroom Mobile?

A: This preset was designed for RAW files to be edited on Lightroom Desktop. If you want to convert the .xmp file to a .dng file to use on the Lr Mobile App, be mindful this preset will *not* look the same on phone photos, and we discourage using Season Free Preset this way.

Q: Why can't I install the XMP files?

A: .xmp is Adobe's new way of saving and reading custom presets. In order for you to install these presets you need an updated version of Lightroom Classic CC. Update your software and you will be good to go.

Q: Why do my photos not look like your photos after I apply them?

A: All presets work differently on every image and because every image is different (light, colors, etc). You will most likely have to tweak the White Balance (temp + tint) and exposure in your image before you add Seasons Free Preset.
